Thomson Reuters Recruitment Team

Dear Hiring Manager,

I am beyond thrilled to be applying for the **Software Developer Intern** position at **Thomson Reuters**. As a second-year Computer Science student at Ryerson University with significant knowledge regarding programming and computer methodologies, and a strong mindset to discover more, this unique opportunity sparked my interest. With my outstanding communication and problem-solving skills, in coordination with my presented academic abilities, I consider myself to be a fitting candidate for this position. Thomson Reuters belief in striving for excellence and empowerment showcased through their previous and ongoing accomplishments, compelled me to apply.

Thomson Reuters determination in developing solutions to challenging problems correlates with my abilities to solve complex problems and develop modern and inventive code. My previous work experiences and studies in Computer Science have contributed to my skills and have equipped me with the ability to develop effective solutions, maintain high-quality code, and implement modern-day technologies, which are all requirements of the Software Developer Intern position. I showcase this in my personal project of a *Full Stack Tour-Booking Application*. I used modern-day technologies such as Node.js and Express.js to build the back-end of the application, which connects to a RESTful API I designed that supports CRUD operations on the MongoDB database. I utilized modern-day practices such as filtering and pagination for better API support and used PUG templates for the front end to develop a clean and modern user interface that follows UI/UX principles. As a Software Developer Intern student, I would excel in my existing programming skills to plan, develop, and maintain high-quality applications that fit modern-day principles.

Aside from my academic accomplishments and programming knowledge, which is not limited to Java, JavaScript, Python, HTML, CSS/SCSS, I possess excellent verbal, written, communication, and detail-oriented skills which are proven through my previous work experiences. For instance, as a Youth Ambassador for the Toronto Transit Commission (TTC), I attained 302 survey responses from a range of demographics in racially diverse communities. I strategized and developed physical and virtual engagement tactics to gain the interest of community members to partake in the survey to gain feedback on the transit system. Combined with my communication skills, I possess strong problem-solving skills and the ability to adapt to different environments, which is proven through my previous Computer Programmer Co-op position at Builder Lynx. At Builder Lynx, I used strong detail-oriented skills to upload client data to a cloud-based software while maintaining deadlines and communicating with clients to resolve any problems in their data. These skills and qualities, along with a passion to learn more, directly relate to Thomson Reuters and the Software Developer Intern position.

Below I have attached my resume which further shows the skills I possess. I would appreciate the opportunity to further communicate with you. Thank you for your time and consideration.

Sincerely,

Furrukh Tanveer
